Re: Apeiron Stone Care

In an effort to reduce Terrazzo maintenance we looked at several Stone Polishing processes to reduce labor, chemical usage, and finish expenditures.

In the end we have found the Apeiron product and process to provide the best end results. It has a superior appearance and durability, in addition to being a less labor intensive application.

We initially started with one of our Elementary Schools and were pleased with the results after 12 months of dust moping and Auto Scrubbing only, and have since continued to convert from floor finish application to Apeiron 2 Step Stone Polishing on our Terrazzo corridors.

With the reduction in dollars spent and time needed for scrubbing, stripping, and refinishing corridors, we have been able to redirect the labor hour and funds to preventative maintenance and sanitation. Thus improving our ability to clean for Health in an effort to improve Student and Employee attendance.

Randy Scott,
Program Director of Custodial Services
